# INSIGHTS

- **Movies dominate Netflix's content library**, accounting for a significantly larger share of the catalog compared to TV Shows.
- **Content additions increased rapidly after 2015**, reflecting Netflix's aggressive expansion and investment in original and licensed content.
- **The United States is the largest content contributor**, followed by countries such as India and the United Kingdom.
- **TV-MA is the most common content rating**, indicating that a large portion of Netflix content is targeted toward mature audiences.
- **Drama and International Movies are the most prevalent genres**, highlighting Netflix's focus on diverse and globally appealing content.
- **Most movies have a duration of less than 120 minutes**, suggesting a preference for standard-length feature films.
- **Content releases are concentrated in specific months**, indicating strategic scheduling of new additions throughout the year.
- **A small group of directors contribute multiple titles**, demonstrating recurring collaborations between Netflix and selected creators.
- **International content has grown substantially in recent years**, supporting Netflix's strategy of expanding its global audience.
- **Recent releases make up a large portion of the catalog**, showing Netflix's commitment to continuously refreshing its content library.
